FOR USE ONLY IN
THE NORTH CAROLINA COLLECTION

North Carolina 1866-1974

FOREWORD

Agriculture in North Carolina is dynamic — ever changing. For example, farm numbers in the State have declined sharply through the years; today's farm count is less than half the number at the end of World War II.

Longtime trends in North Carolina acreages also show major shifts — cotton being a significant loser and soybeans a sharp gainer. Past history has proven to be an invaluable guide to the future. In other words, it is good to know where you have been before deciding where you are going. As North Carolina's agriculture continues to move ahead in a dynamic way, new problems must be solved and new challenges met. This publication has been prepared to help meet these needs.

"North Carolina Historic Estimates" presents acreage, yield, production, price and value for most crops from 1866 through 1974. Preliminary estimates continuing these data series through 1979 are available in the "North Carolina Agricultural Statistics", Bulletin numbers 137, 138, and 141.

I am pleased to present for your use this historic record of crop information prepared by the North Carolina Crop and Livestock Reporting Service.

u transferation in Late 2.7														

Production in bales. 2 Too small to estimate.

NOTE: In some cases the acreage or yield or production is identical for more than one year. In such cases the year shown is the latest year of occurrence.
